

Heliotronics' SunTouch™ 17" touch screen kiosk

Heliotronics Introduces the SunTouch™ Kiosk Line:

Heliotronics, Inc. has introduced a 17" touch screen kiosk for use in renewable energy lobby displays. Well suited for data displays made by many vendors, this kiosk offers an economical and attractive option for lobby displays. Many building interiors are trimmed in wood and this wooden pedestal kiosk line offers a desirable alternative to frequently used metal kiosks. Heliotronics' kiosks feature a handsome Oak or Birch finish. Side door offers easy access after installation. High quality ELO touch screen and Dell computer makes service a rare but easily managed event. Heliotronics has deployed wood kiosks for years and they have proven to be rugged even in heavily trafficked areas. This Kiosk is ideally suited for use with many different data acquisition systems including our own Epiphany™ line.
