

PRODUCT HIGHLIGHT

GREAT LOOKS

We began by designing a rugged, attractive cabinet. We made it from wood (oak and maple finish available) to provide harmony with green architecture. While we were at it we moved the access door to the side for easy access even after it is installed. Finally we got the intake vent away from the floor to minimize dust infiltration into the cabinet.

SMART COMPONENT SELECTION

At the heart of any kiosk is its touch screen. We selected ELO because of their solid reputation and 3 year warranty. Add to that an ultra small form factor computer that runs cool and quiet and carries a 3 year manufacturer's on-site service warranty.

RELIABLE OPERATION

Long life depends upon keeping things cool. Heavy dust build-up promotes overheating. We moved the air intake up from the floor to minimize dust infiltration. We added a quiet fan to assure a continuous supply of cool air. And we selected a low power computer which reduces cabinet heating.

We include high quality surge suppressor and battery backup to avoid operational disruptions from power fluctuations.

SunViewer™ Touch Touch Screen Kiosk

Looking For a Kiosk With Great Aesthetics,
Rugged Design For High Traffic Areas,
Excellent Lead Times and a Great Price?

You've found it!

17" Touch screen kiosk.
